

Experiment 23 :

Develop a Python program that evaluates the coherence of a given text.

Code:

```
text = input("Enter text: ")
sentences = text.split(".")
count = len([s for s in sentences if s.strip()])
if count > 1:
    print("Coherence Score:", round(1/count,2))
else:
    print("Coherence Score: 1.0")
```

Output

The screenshot shows a terminal window with a dark background. The Python code from the previous block is pasted into the terminal. Below the code, the user has entered the text "Natural Language Processing is interesting. It is use". The program has executed and printed the output "Coherence Score: 0.5". The terminal window is titled "Terminal" and "Python 3". The system tray at the bottom shows the time as 2:05 PM on 28-07-2026, along with various system icons like network, volume, and battery.

```
text = input("Enter text: ")
sentences = text.split(".")
count = len([s for s in sentences if s.strip()])
if count > 1:
    print("Coherence Score:", round(1/count,2))
else:
    print("Coherence Score: 1.0")

... Enter text: Natural Language Processing is interesting. It is use
Coherence Score: 0.5
```
