

Experiment 24 :

Create a Python program that recognizes dialog acts in a given dialog or conversation.

Code:

```
dialog = input("Enter dialog: ")
if dialog.lower().startswith(("hi", "hello")):
    print("Dialog Act: Greeting")
elif dialog.endswith("?"):
    print("Dialog Act: Question")
else:
    print("Dialog Act: Statement")
```

Output

The screenshot shows a terminal window with a dark background. The Python code from the previous block is pasted into the terminal. A play button icon is visible at the top left of the code area. Below the code, the terminal shows the prompt 'Enter dialog: ' followed by the user input 'Hello, how are you?'. The output of the program is 'Dialog Act: Question'. The terminal window has a title bar with 'Terminal' and 'Python 3'. The system tray at the bottom shows the time as 2:08 PM on 28-07-2026, along with various system icons like network, volume, and battery.

```
dialog = input("Enter dialog: ")
if dialog.lower().startswith(("hi", "hello")):
    print("Dialog Act: Greeting")
elif dialog.endswith("?"):
    print("Dialog Act: Question")
else:
    print("Dialog Act: Statement")

... Enter dialog: Hello, how are you?
Dialog Act: Question
```
