

Experiment 1 :

```
import re

text = input("Enter the text: ")

pattern = input("Enter the pattern: ")

matches = re.findall(pattern, text)

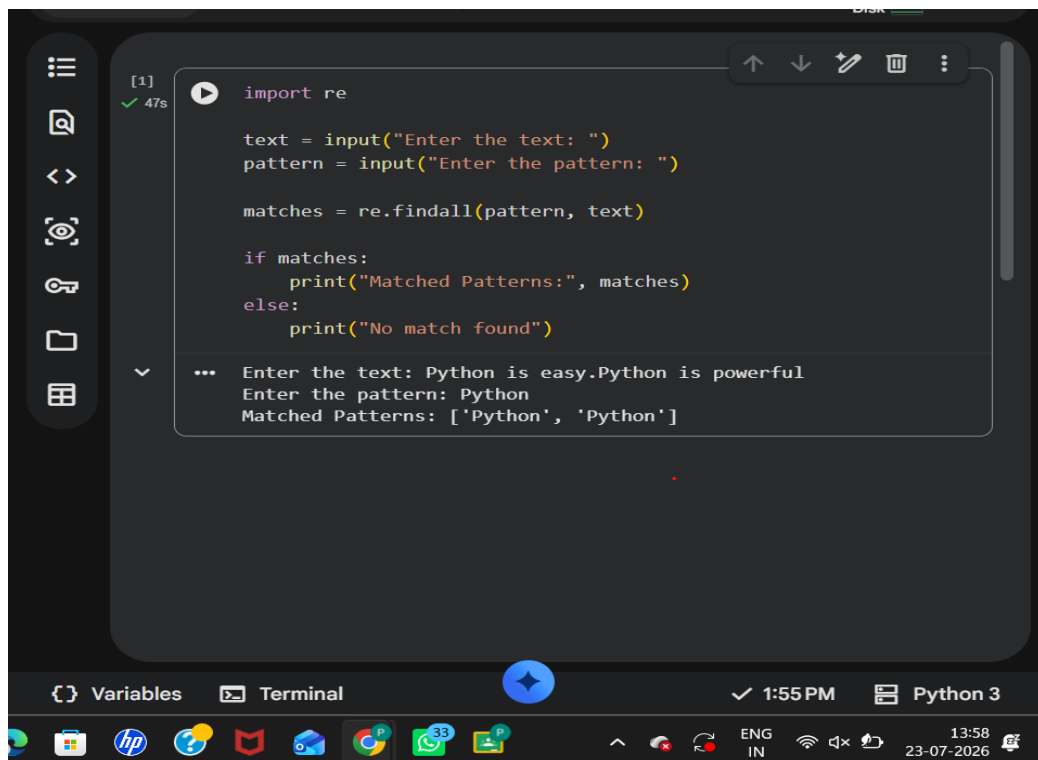

if matches:

    print("Matched Patterns:", matches)

else:

    print("No match found")
```

Output

```
[1] ✓ 47s
import re

text = input("Enter the text: ")
pattern = input("Enter the pattern: ")

matches = re.findall(pattern, text)

if matches:
    print("Matched Patterns:", matches)
else:
    print("No match found")

... Enter the text: Python is easy.Python is powerful
Enter the pattern: Python
Matched Patterns: ['Python', 'Python']
```

The screenshot shows a Python IDE interface. The main editor window displays the Python code for finding matches. Below the code, the input and output of the program are shown. The user entered "Python is easy.Python is powerful" for the text and "Python" for the pattern. The output shows the matched patterns as ["Python", "Python"]. The IDE's status bar at the bottom indicates the file is named "Python 3" and the time is 1:55 PM. The system tray at the very bottom shows various icons including HP, a question mark, a red envelope, a blue envelope, a Chrome icon with a 'P' badge, a WhatsApp icon with a '33' badge, and a file explorer icon with a 'P' badge. The system clock shows 13:58 on 23-07-2026.
