

Experiment 5 :

Use the Porter Stemmer algorithm to perform word stemming on a list of words using Python libraries.

Code:

```
from nltk.stem import PorterStemmer

# Create Porter Stemmer object

ps = PorterStemmer()

# List of words

words = ["playing", "running", "happiness", "studies", "connected"]

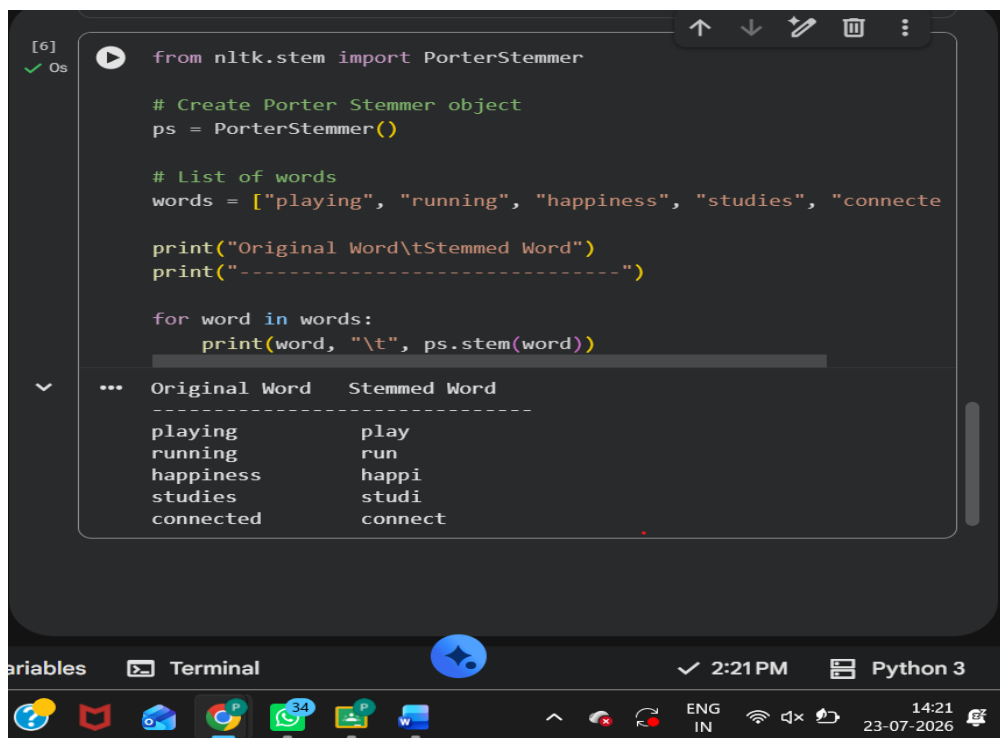

print("Original Word\tStemmed Word")

print("-----")

for word in words:

    print(word, "\t", ps.stem(word))
```

Output

```
[6] ✓ 0s from nltk.stem import PorterStemmer

# Create Porter Stemmer object
ps = PorterStemmer()

# List of words
words = ["playing", "running", "happiness", "studies", "connecte

print("Original Word\tStemmed Word")
print("-----")

for word in words:
    print(word, "\t", ps.stem(word))
```

Original Word	Stemmed Word
playing	play
running	run
happiness	happi
studies	studi
connected	connect
