

Experiment 14 :

Create a Program in Python to Check Agreement in Sentences Based on Context-Free Grammar Rules

Code:

```
sentence = input("Enter a sentence: ").lower().split()

if len(sentence) >= 2:
    subject = sentence[0]
    verb = sentence[1]
    if (subject == "he" and verb == "runs") or \
        (subject == "she" and verb == "runs") or \
        (subject == "they" and verb == "run") or \
        (subject == "we" and verb == "run"):
        print("Sentence Agreement: Correct")
    else:
        print("Sentence Agreement: Incorrect")
else:
    print("Invalid Sentence")
```

Output

```
sentence = input("Enter a sentence: ").lower().split()

if len(sentence) >= 2:
    subject = sentence[0]
    verb = sentence[1]
    if (subject == "he" and verb == "runs") or \
        (subject == "she" and verb == "runs") or \
        (subject == "they" and verb == "run") or \
        (subject == "we" and verb == "run"):
        print("Sentence Agreement: Correct")
    else:
        print("Sentence Agreement: Incorrect")
else:
    print("Invalid Sentence")

... Enter a sentence: he runs
Sentence Agreement: Correct
```

The screenshot shows a terminal window with a dark background. The Python code is displayed in a light blue font. The user has entered "he runs" as the sentence, and the program has output "Sentence Agreement: Correct". The terminal window is titled "Terminal" and shows the system time as 1:33 PM on 28-07-2026. The Python version is 3.
