

Experiment 17 :

Write a program that demonstrates how to access WordNet, a lexical database, to retrieve synsets and explore word meanings in Python.

Code:

```
import nltk

from nltk.corpus import wordnet

nltk.download('wordnet')

word = input("Enter a word: ")

synsets = wordnet.synsets(word)

for syn in synsets:

    print("Synset:", syn.name())

    print("Definition:", syn.definition())

    print("Example:", syn.examples())

    print()
```

Output

```
import nltk
from nltk.corpus import wordnet

nltk.download('wordnet')

word = input("Enter a word: ")

synsets = wordnet.synsets(word)

for syn in synsets:
    print("Synset:", syn.name())
    print("Definition:", syn.definition())
    print("Example:", syn.examples())
    print()
    Example: ['he operated a bank of switches']
...
Synset: bank.n.05
Definition: a supply or stock held in reserve for future use (es
Example: []

Synset: bank.n.06
Definition: the funds held by a gambling house or the dealer in
Example: ['he tried to break the bank at Monte Carlo']
```
