

Experiment 19 :

Create a Program for Word Sense Disambiguation Using the Lesk Algorithm

Code:

```
import nltk

from nltk.wsd import lesk

from nltk.tokenize import word_tokenize

nltk.download('wordnet')

nltk.download('punkt')

sentence = input("Enter sentence: ")

word = input("Enter ambiguous word: ")

sense = lesk(word_tokenize(sentence), word)

print("Predicted Sense:", sense)

print("Definition:", sense.definition())
```

Output

```
from nltk.wsd import lesk
from nltk.tokenize import word_tokenize

nltk.download('wordnet')
nltk.download('punkt')
nltk.download('punkt_tab')

sentence = input("Enter sentence: ")
word = input("Enter ambiguous word: ")

sense = lesk(word_tokenize(sentence), word)

print("Predicted Sense:", sense)
print("Definition:", sense.definition())

... [tk_data] Downloading package wordnet to /root/nltk_data...
[tk_data] Package wordnet is already up-to-date!
[tk_data] Downloading package punkt to /root/nltk_data...
[tk_data] Package punkt is already up-to-date!
[tk_data] Downloading package punkt_tab to /root/nltk_data...
[tk_data] Unzipping tokenizers/punkt_tab.zip.
Enter sentence: I deposited money in the bank.
Enter ambiguous word: bank
Predicted Sense: Synset('savings_bank.n.02')
Definition: a container (usually with a slot in the top) for keeping
```

The screenshot shows a terminal window with a dark background. The top part displays the Python code for word sense disambiguation. The bottom part shows the execution output, including package download status for NLTK and the final prediction and definition for the word 'bank' in the sentence 'I deposited money in the bank.' The terminal window has a title bar with 'Terminal' and a status bar at the bottom showing system icons and the time '13:52' on '28-07-2026'.
